Since 1963, Hemphill Construction Co., Inc., has provided multifaceted construction services for government and private owners throughout the Southeast. We have established an unparalleled reputation for quality, integrity, hard work and service. We are known for our ability to handle difficult and one-of-a-kind civil construction projects.

We offer the experience, innovation and persistence to meet any challenge. We have the depth of staff to self-perform the majority of our work.

Hemphill Construction attributes its success to its people and accumulated skills and expertise of thousands of man-hours of service. Our workforce is composed of talented, skilled and competent craftsmen at all levels.

We are dedicated to using the latest technology and making ongoing significant capital investments in state-of-the-art equipment to handle even the most complex projects.

**QUALITY, SAFETY AND  
CLIENT SATISFACTION**  
are our most important objectives.

# SAFETY

Hemphill Construction has a Safety Department which answers directly to the president of the company. This department is responsible for safety training of all personnel and compiling statistics for all of the departments. Hemphill Construction safety officials hold safety meetings with safety training for all foremen and superintendents.

Safety starts at the top. Weekly organizational meetings are held and safety performance is discussed at each one of these meetings. Specifics of all major lost time accidents and the overall record of the various departments are discussed at the weekly meetings.

Weekly on-the-job "Tool Box/Safety Training" meetings are held at the workplace to discuss safety concerns

with the hourly employees and subcontractors. These talks are arranged by the project supervisor and company safety personnel are encouraged to attend. All foremen and superintendents go through an OSHA training course and hold current Red Cross Emergency First Aid training cards.

Hemphill Construction Safety Department officials conduct routine inspections of all of the jobsites. They inspect all aspects of the workplace and see that the work is being constructed in a safe manner. These officials will insist on immediate remedies to any unsafe conditions which may exist and have the authority to halt work until any unsafe condition is corrected. Hemphill Construction has a "Safety

Manual" which is given to our foremen and superintendents. This manual is kept available for ready review at the jobsite and compliance with procedures outlined in this manual is mandatory for all employees.

Drug testing is mandatory for all new employees. Hemphill Construction also requires post-accident drug testing, as well as the possibility of random testing done on an unannounced basis. Through constant reminders, daily practice and a strong commitment to "keeping it safe," safety remains JOB ONE at Hemphill Construction.

Dwayne Toombs,  
Safety Director

Retail and Commercial Development often has multiple projects being constructed on the same site; thus, scheduling and experience is a must. Since our first Retail/Commercial development in 1984 we have been delivering sites that are built for the

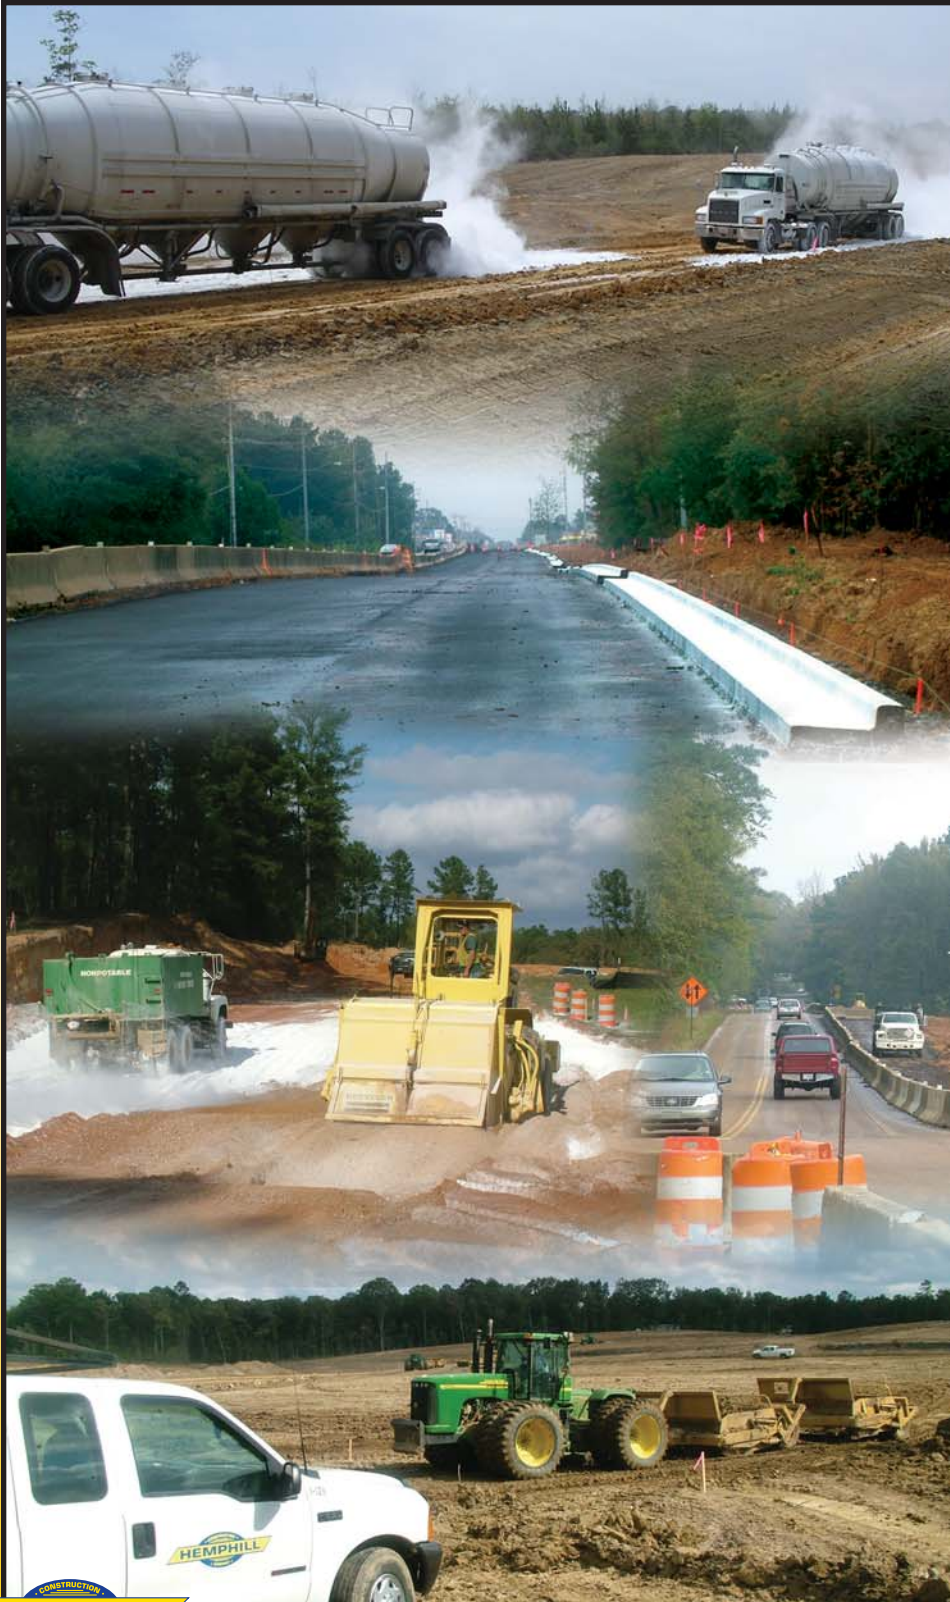

toughest clients. Our clients find it highly beneficial having Hemphill Construction deliver all phases of the site development. From the initial clearing to the final landscaping, Hemphill Construction is ready for the task.

# ROAD & HEAVY CONSTRUCTION

Hemphill Construction provides grading and/or paving construction. Our projects provide a variety of

services from clearing, site grading, curb and gutter, to final paving and striping.

# UTILITY & PIPELINES

Pipeline projects are the cornerstone of Hemphill Construction. Through the years, we have demonstrated that we offer the most qualified staff, experience and equipment to construct almost any type of pipeline in any kind of soil conditions. We have experience laying pipelines in even the most difficult terrain and urban/industrial environments.

Our experience in pipeline projects ensures compliance with minimal cost. Our approach is based on establishing a common goal and working closely with the client to achieve that goal within

budget and often with early completion. Clients continually turn to Hemphill Construction for repeat business.

We have performed hundreds of projects ranging from 4-inch lines in treatment plants to 108-inch sewers, and we routinely build water mains, sewage force mains and other pipelines from materials such as ductile iron, steel, stainless steel, fiberglass, concrete and plastic products. We also have experience with many large diameter sewage slip-lining projects throughout the southeast United States.

# TREATMENT PLANTS & PUMP STATIONS

## PROJECTS

Increasing environmental regulations, coupled with population growth, have increased the demand for clean water and wastewater disposal facilities. For many years, Hemphill Construction has worked with the authorities to develop adequate water supplies. We are a leader in the construction and expansion of water treatment plants, water booster stations, and industrial/hazardous waste water treatment facilities for governments and private clients.

Our experience is extensive, with projects ranging from water intakes in deep lakes using cofferdams to large

treatment facilities. We offer comprehensive services to steer a project from start to finish, including structural excavation, backfill, site grading, concrete formwork, installation of reinforcing steel, placing and finishing concrete, mechanical equipment installation and instrument start-up.

We are prepared to fulfill all of our client's needs, whether it involves working the project ourselves or cooperating with other companies. Our staff employs the latest advances in technology to ensure that our work is both high-performance and in compliance with regulatory requirements.
